SUMMARY

Fresher DevOps Engineer with 9 months of hands-on training in Linux, AWS, Docker, Kubernetes, Jenkins, Terraform, Python, and Datadog. Completed an advanced DevOps program at HisanLabs Pvt Ltd, Pune, where I practised on real tools and environments — building CI/CD pipelines, deploying containerized applications on Kubernetes, and automating infrastructure with Terraform. Looking for a junior DevOps or cloud support role where I can contribute and grow.

TRAINING EXPERIENCE

DevOps Engineer Trainee

Aug 2025 – Apr 2026 (9 Months)

HisanLabs Pvt Ltd

Linux & System Administration

- Practised full Linux administration on Ubuntu and RedHat — file system management, user and group control, permission management, Vim editor, crontab scheduling, and process management.
- Worked with package managers (apt/yum), shell redirectors, archiving tools, and basic Linux networking commands used in real server environments.

AWS Cloud

- Set up and managed EC2 instances; configured IAM users, groups, roles, and policies with least-privilege access across multiple environments.
- Built VPCs with public/private subnets, NAT Gateway, Internet Gateway, route tables, and security groups; configured ELB, Auto Scaling, CloudWatch alarms, Lambda, CloudFront, and Route 53.
- Worked hands-on with S3, EBS, AMI, RDS (MySQL), and learned how to monitor all resources using CloudWatch dashboards and metrics.

Docker & Containerization

- Wrote Dockerfiles to containerize applications; configured Docker Networking for container communication and Docker Volumes for persistent data storage.
- Used Docker Compose to define and run multi-container environments.

Kubernetes (K8s)

- Set up Kubernetes clusters using Kubeadm, MiniKube, and AWS EKS; wrote YAML manifests by hand for Pods, Deployments, ReplicaSets, StatefulSets, and Services.
- Worked with Kubernetes Networking to enable inter-pod and inter-service communication; deployed a three-tier app on Kubernetes with proper resource separation between tiers.

Terraform

- Wrote Terraform configurations to provision AWS infrastructure — VPC, subnets, EC2, RDS, security groups — using modules, variables, providers, and state file management.

Python & Shell Scripting

- Learned Python fundamentals — data structures, functions, and libraries — and wrote scripts to automate AWS tasks and interact with cloud resources.

Azure & GCP (Fundamentals)

- Explored Azure and GCP basics — created VMs, set up IAM users and service accounts, created storage buckets, and configured VPC networks on both platforms.
- Compared Azure Active Directory and GCP IAM with AWS IAM to understand identity management across all three major cloud providers.

TRAINING PROJECTS

These are projects completed during my 9-month DevOps training program at , Pune.

AWS Infrastructure Automation with Terraform

- Provisioned a complete AWS environment from code using Terraform — VPC, public/private subnets, NAT Gateway, Internet Gateway, EC2, RDS, and security groups.
- Structured code into reusable Terraform modules with input variables so the same code works for both dev and production by changing variable values only.
- Followed up with Ansible playbooks to configure EC2 instances automatically after Terraform provisioning.

CI/CD Pipeline — Jenkins, Docker

Created a Jenkins CI/CD pipeline to pull code from GitHub, create Docker images, and deploy automatically to AWS EC2.

TECHNICAL SKILLS

Cloud: AWS (EC2, IAM, S3, EBS, AMI, RDS, VPC, Lambda, CloudFront, Route 53, Auto Scaling, CloudWatch) · GCP (basics) · Azure (basics)

CI/CD: basic knowledge of Jenkins (Freestyle, Declarative, Master-Slave, Multibranch, Parameterized) · GitHub Actions

Containers: Docker · Dockerfile · Docker Compose · Docker Volumes · Docker Networking

Orchestration: Kubernetes — EKS, Kubeadm, MiniKube · Pods, Deployments, StatefulSets, Services, ReplicaSets

IaC & Config: Terraform (Modules, Variables, State, Providers)

Monitoring: AWS CloudWatch

Scripting: Python · Shell Scripting

Source Control: Git · GitHub · GitLab · BitBucket

Linux: Ubuntu · Permissions · Crontab · Process mgmt

Databases: MySQL (RDS) · DynamoDB

EDUCATION

B.Sc. in Computer Science

2025

Haribhai V. Desai College of Commerce, Arts and Science, Pune · CGPA: 7.21

HSC — Science

2022

Rajiv Gandhi Academy of E-Learning School & Science Junior College

CERTIFICATIONS

Advanced DevOps, AWS & Linux (9-Month Program) — HisanLabs Pvt Ltd, Pune · 2026

Covered: Linux · AWS · Jenkins · Docker · Kubernetes · Terraform · Python · Shell Scripting · GitHub Actions · Azure · GCP

LANGUAGES

English · Marathi · Hindi
